3 Units**ENVS 663. Climate and Environmental Change**

Description: Global and regional climate change is one of the most pressing issues of our time. The science of climate change has employed a great diversity of techniques to unravel the Earth's climate history on multiple time scales. There now exists a considerable body of knowledge as to the magnitudes and rates of climate and environmental change.

However, while the physical basis of the global climate system and its variation are well resolved, there is debate as to the nature of human intervention in the global climate system and consequences of climate change on the natural and human-made environment. As time moves forward, issues connected to all facets of climate change will become increasingly important particularly in terms of human occupancy and the sustainability of the planet. What is currently missing from debates connected to climate change is an agreed upon understanding the linkages between the physical basis of the global climate system and its connection to human affairs.

3 Units
Term Typically Offered: Fall, Spring

Description: Sociolinguists see language as more than a question of people talking to each other. Language not only communicates ideas, but also communicates our identities in a society. It identifies us as we see ourselves and it identifies us, as others perceive us. Embodied in the act of human communication is a complex set of rules for how to send a message and another set of rules for how to interpret that message. Beyond these rules, socially constructed preconceptions, such as issues of race, class, and gender, can have an influence on the way people choose to communicate with others and on how that communication is understood by others. Much of this operates subtly and below our consciousness, such as when we say one thing, but our kinesics (body language) displays a different attitude. However, there are some, particularly those working in politics or advertising, who have developed a keen ability to manipulate or otherwise channel messages for a special effect.

PHEP 200. Disease Detectives - SB 3 Units**Term Typically Offered:** Spring Only**Description:** Life expectancy has increased from about 47 to 87 years from the start of the 20th century. This increase was produced primarily by controlling infectious diseases with vaccines, antibiotics, and improved sanitation and nutrition. However, these measures would not have been successful without changes in social policies, economics, and behaviors. This course examines the history of advances in population health, highlighting influential people and cultures and illustrating how they used critical thinking and the scientific approach to integrate information from biological, social and behavioral sciences to make these advancements. Each class tells the backstory behind a selected historical breakthrough in public health philosophy, science and methods that improved population health.For class offerings for a specific term, refer to the Schedule of Classes (<http://htmlaccess.louisville.edu/classSchedule/setupSearchClassSchedule.cfm>)

It is not generally well recognized that these terms, and the methods used to describe their course, can be applied to slow-moving noncommunicable diseases, such as obesity, heart disease and cancer, as well as outbreaks of drug abuse, violence, or mass hysteria, in addition to acute infectious diseases such as COVID-19. The course will examine the dynamics of these outbreaks. Why do they start, what makes them take off, and why do they decline? In addition, the concept of the "syndemic", or the confluence and synergism in time and space of two or more outbreaks, will be examined.

Questions about those circumstances structure the course. Another question addressed by the course: how can knowing more about globalization and in/equality help us develop the human career in different possible directions? The readings and other materials vary greatly by period, by spatial focus, and by analytical perspective. Term Typically Offered: Fall, Spring, Summer

Description: This course focuses on the major threats to social cohesion and order in society and how such social problems affect human behavior. However, there are socially structured contexts out of which individuals emerge and in which social problems are created, sustained, and/or changed - and, thus, impact human behavior. The purpose of the course, then, is to expand the student's understanding of current social problems related to inequality, social institutions, and modernization using the "sociological imagination," which distinguishes between personal and social problems and assumes the latter to be shaped by social forces/factors beyond an individual's control.

Description: The relationship between humans and animals dates back many millennia, as animals have long served as sources of food, clothing, transportation, service, as well as intrigue and controversy. However, this relationship has been inconsistent across time and cultures, and, in recent years, greater attention has focused on how animals factor into the lives of humans in light of ecological and agricultural concerns; changing patterns of family and community; increasing use of animals in not only service but also sport and entertainment; and debate regarding the hierarchical and ethical nature of these relationships. Today, social scientists are examining the complex and changing social, ethical, and ecological consequences of human-animal interaction, and this course offers a sociological examination into the increasingly prevalent and controversial roles animals play in society and the effect of those roles on both humans and animals. Prerequisite(s): SOC 201 and SOC 323; or nine hours at the 300+ level in one social science; or permission of the instructor.

Description: Since at least as far back as Classical Greece, social thinkers have debated the role of leisure in society, whether it be a means to recharge the enervated body and mind for more productive work; strengthen an individual's character, skills, sense of balance, and self-concept; or to pass time through amusement. The study of leisure suggests that what is considered "proper" leisure has varied from place to place and changed over time, i.e., judgments of leisure are culturally constructed. Leisure is generally regarded as a key social institution that helps to socialize individuals and shape society. The first half of the course will examine contemporary and past leisure patterns, theories on leisure, benefits derived from leisure for self and society, relationships with work, socialization into particular leisure pursuits, and constraints to participation. The latter half will cover the commodification of leisure and the leisure "industries," college students' leisure, and tourism.

Seeing Gender: Introduction to Gender in Visual Studies - AH, D1****3 Units****Term Typically Offered:** Fall, Spring**Description:** This course introduces students to the disciplines of Visual Studies and Women's, Gender and Sexuality Studies. It explores the many ways in which these fields intersect through a consideration of two primary, related concepts: the social construction of vision and its inverse, the visual construction of the social. The first highlights how humans are conditioned to see the way they do because they are social animals. The latter underscores the fact that it is equally true that social arrangements, such as gender and race, take the forms that they do because humans are seeing animals. This framework allows students to critically engage some of the central questions that have shaped both Visual Studies and Women's, Gender and Sexuality Studies. How does seeing impose itself upon the social construction of gender and other forms of identity, such as racial and sexual identity? What is the relationship between images and words, and how does that relationship affect the politics of how images are used? What are the mechanisms by which vision and visual images become gendered or racialized? Why is visual experience so fraught with anxiety and fantasy? How do visual encounters with other people (and with images and objects) inform the construction of social life as gendered and racialized?For class offerings for a specific term, refer to the Schedule of Classes (<http://htmlaccess.louisville.edu/classSchedule/setupSearchClassSchedule.cfm>)**WGST 203. WGST 508. Queer Performance 3 Units**Term Typically Offered:** Occasionally Offered**Description:** What constitutes queer performance? Is queer who you are or what you do? Is sexuality all we mean by queer? What are the historical, aesthetic, and political aspects of queer performance? Integral to our theoretical discussions will be questions of practice and production: Where is queer performance staged and how is it received? How is it produced, for whom, by whom, and with what funds? Is queer inherently or even necessarily radical? Within rigid Western notions of gender, the "Queer Performer," is a gender outlaw; an individual who pushed at the edges of gender, forcing us to recognize that gender has little to do with our biological sex. Their performances of their gender(s), race(s), and/or sexuality(ies) challenges our prevailing notions of what it means to be Queer and what it means to perform identity. This course will examine the artistic and aesthetic performances of various Queer Performers to foster an understanding and appreciation of the rich diversity of the forms of performance styles and practitioners that might be called "lesbian," "gay," "transgender," and "queer," among others. Secondly, it will motivate students to examine the broad social, political, religious, and cultural contexts in which queer performance takes place. Lastly, this course will allow students to contemplate what it means to be a spectator of performance through a queer perspective, regardless of one's identity, or sexual orientation.**Note:** Cross-listed with WGST 608 and HUM 608.

This historical framework will be brought to bear upon the dynamics of how trauma and visuality have been approached by scientists, scholars, and artists.
