**ARTH 523. History of Performance Art** **3 Units**
**Prerequisite(s):** ARTH 270 and ARTH 325; or permission of instructor; or graduate standing.
**Description:** History of Performance Art is designed as an advanced upper-level seminar that investigates the international, historical developments in Performance Art after World War II. It considers the experimental strategies and ideological aims of visual artists who used their bodies as the primary vehicle of expression, information, communication, and social change. Performance Art has had the dubious distinction of being the most censored art medium, and since the 1960s artists have been continually arrested and fined for their work. This is a highly significant social fact, one that draws attention to Performance Art's particularly disruptive aesthetic codes and materials-emphasizing presentation over representation; intersubjective, human bodies over inanimate objects; and temporarily over spatiality.

The course is designed so that students can grapple with a central issue for contemporary art-the definition of a burgeoning critical term for art history.

**Prerequisite(s):** ARTH 270 and ARTH 325; or permission of instructor.

Beginning with the Holocaust, the course charts a trajectory from this most profound of collective traumas, to the refinement of clinical definitions of trauma (e.g., PTSD) in the wake of the Vietnam War, to the development of trauma studies in the humanities in the 1990s, to the recent "pictorial turn" within scholarship on trauma. This historical framework will be brought to bear upon the dynamics of how trauma and visuality have been approached by scientists, scholars, and artists.

**ENVS 663. Climate and Environmental Change** **3 Units**
**Description:** Global and regional climate change is one of the most pressing issues of our time. The science of climate change has employed a great diversity of techniques to unravel the Earth's climate history on multiple time scales. There now exists a considerable body of knowledge as to the magnitudes and rates of climate and environmental change. However, while the physical basis of the global climate system and its variation are well resolved, there is debate as to the nature of human intervention in the global climate system and consequences of climate change on the natural and human-made environment. As time moves forward, issues connected to all facets of climate change will become increasingly important particularly in terms of human occupancy and the sustainability of the planet. What is currently missing from debates connected to climate change is an agreed upon understanding the linkages between the physical basis of the global climate system and its connection to human affairs.

**Prerequisite(s):** none.
**Corequisite(s):** none.
**Description:** Prerequisites or corequisites: none. What really makes a story "Jewish?" The exciting, far-ranging, and international Jewish short stories we will explore are immersed in the Jewish historical experience and what can only be called an intoxication with language, displaying a dazzling range of style ranging from the melancholy and tragic to the playful and satiric. Their voices give us insight into the world in which they live and the ideas that live in their imagination. We will learn about the surprisingly diverse Jewish settings and environments that enliven the Jewish short story and analyze the language the characters use, and the narrator uses, to establish the theme of the story. Students will assess how an author can use this genre to reflect on what makes up Jewish identity while complicating the question of the "Jewish author" label. The Jewish experience in modernity and the conflicts and challenges it has struggled with has been the subject of a significant body of literature.
**Note:** There is a significant writing requirement in this course (it has been offered as Hum 363 WR: Special Topics in the past); we would like it to keep WR designation.

More than a historical overview, this course includes selected readings and film which provide glimpses behind the facade of the "other", to see some of the struggles they face as they become part of the American "fabric'. **PAS 247. Language, Protest and Identity** **3 Units**
**Term Typically Offered:** Fall, Spring
**Description:** Sociolinguists see language as more than a question of people talking to each other. Language not only communicates ideas, but also communicates our identities in a society. It identifies us as we see ourselves and it identifies us, as others perceive us. Embodied in the act of human communication is a complex set of rules for how to send a message and another set of rules for how to interpret that message. Beyond these rules, socially constructed preconceptions, such as issues of race, class, and gender, can have an influence on the way people choose to communicate with others and on how that communication is understood by others. Much of this operates subtly and below our consciousness, such as when we say one thing, but our kinesics (body language) displays a different attitude. However, there are some, particularly those working in politics or advertising, who have developed a keen ability to manipulate or otherwise channel messages for a special effect.

**PHEP 200. Disease Detectives - SB** **3 Units**

**Term Typically Offered:** Spring Only

**Description:** Life expectancy has increased from about 47 to 87 years from the start of the 20th century. This increase was produced primarily by controlling infectious diseases with vaccines, antibiotics, and improved sanitation and nutrition. However, these measures would not have been successful without changes in social policies, economics, and behaviors. This course examines the history of advances in population health, highlighting influential people and cultures and illustrating how they used critical thinking and the scientific approach to integrate information from biological, social and behavioral sciences to make these advancements. Each class tells the backstory behind a selected historical breakthrough in public health philosophy, science and methods that improved population health.

**Term Typically Offered:** Fall Only

**Description:** This course provides an overview of the definition, measurement and prediction of epidemic and pandemic events. It is not generally well recognized that these terms, and the methods used to describe their course, can be applied to slow-moving noncommunicable diseases, such as obesity, heart disease and cancer, as well as outbreaks of drug abuse, violence, or mass hysteria, in addition to acute infectious diseases such as COVID-19. The course will examine the dynamics of these outbreaks. Why do they start, what makes them take off, and why do they decline? In addition, the concept of the "syndemic", or the confluence and synergism in time and space of two or more outbreaks, will be examined.

**Term Typically Offered:** Fall Only

**Description:** This course will review evidence for climate change and environmental disruption, and evaluate their potential impact on the future of global public health and the policies and actions we must enact to mitigate their effects. Scientific evidence suggests that climate change is occurring and is having widespread impacts on weather, including increases in both drought and hurricane frequency, and rising sea levels. Environmental degradation is accelerating also due to deforestation, agriculture, mining, and the growth of megacities. Taken together these changes may disrupt the balance of ecosystems across the world, increasing risk for multiple adverse health outcomes, including future zoonotic pandemics.

The course uses data and perspectives from across the social sciences to develop a more realistic story--one that understands that people are not boats and the tides can alternately lift them up or beat them down, refresh them or drown them depending on the circumstances. Questions about those circumstances structure the course. Another question addressed by the course: how can knowing more about globalization and in/equality help us develop the human career in different possible directions? The readings and other materials vary greatly by period, by spatical focus, and by analytical perspective. This is a WR course because the topic demands that students learn to pose their own questions about it and to answer those questions in cogent prose.

**SOC 202. Social Problems - P1, SB** **3 Units**

**Term Typically Offered:** Fall, Spring, Summer

**Description:** This course focuses on the major threats to social cohesion and order in society and how such social problems affect human behavior. However, there are socially structured contexts out of which individuals emerge and in which social problems are created, sustained, and/or changed - and, thus, impact human behavior. The purpose of the course, then, is to expand the student's understanding of current social problems related to inequality, social institutions, and modernization using the "sociological imagination," which distinguishes between personal and social problems and assumes the latter to be shaped by social forces/factors beyond an individual's control.

**Description:** This course uses a sociological perspective to examine diversity and inequality and includes an examination of the important contributions various social groups have made to society, the barriers to their full participation in society, and the efforts they have made to achieve equality. An exploration of the nature and consequences of diversity and inequality is essential for understanding social forces and social structures, as well as group processes and organizational dynamics and the way these affect individual life chances. The course will examine scholarship on how race, ethnicity, gender, social class, sexuality, among other social forces, are social constructions that affect groups' life experiences, life chances, and access to power; how diversity and discrimination exist in history and in everyday life; how inequalities are systemic and institutionalized; and strategies and policies for social change.

**SOC 380. Animals and Society** **3 Units**

**Term Typically Offered:** Occasionally Offered

**Description:** The relationship between humans and animals dates back many millennia, as animals have long served as sources of food, clothing, transportation, service, as well as intrigue and controversy. However, this relationship has been inconsistent across time and cultures, and, in recent years, greater attention has focused on how animals factor into the lives of humans in light of ecological and agricultural concerns; changing patterns of family and community; increasing use of animals in not only service but also sport and entertainment; and debate regarding the hierarchical and ethical nature of these relationships. Today, social scientists are examining the complex and changing social, ethical, and ecological consequences of human-animal interaction, and this course offers a sociological examination into the increasingly prevalent and controversial roles animals play in society and the effect of those roles on both humans and animals.

**Term Typically Offered:** Spring Only
**Prerequisite(s):** SOC 201 and SOC 323; or nine hours at the 300+ level in one social science; or permission of the instructor.
**Description:** Since at least as far back as Classical Greece, social thinkers have debated the role of leisure in society, whether it be a means to recharge the enervated body and mind for more productive work; strengthen an individual's character, skills, sense of balance, and self-concept; or to pass time through amusement. The study of leisure suggests that what is considered "proper" leisure has varied from place to place and changed over time, i.e., judgments of leisure are culturally constructed. Leisure is generally regarded as a key social institution that helps to socialize individuals and shape society. The first half of the course will examine contemporary and past leisure patterns, theories on leisure, benefits derived from leisure for self and society, relationships with work, socialization into particular leisure pursuits, and constraints to participation. The latter half will cover the commodification of leisure and the leisure "industries," college students' leisure, and tourism.

**Term Typically Offered:** Occasionally Offered
**Prerequisite(s):** SOC 201 and SOC 320 or SOC 323; or 9 hours at 300+ level in one social science; or permission of instructor.

**Term Typically Offered:** Occasionally Offered
**Description:** The lack of gender parity in American theatre was in the spotlight in the Spring of 2017, when Paula Vogel and Lynn Nottage, two veteran, Pulitzer-Prize winning playwrights, finally received Broadway debuts. The title of Michael Paulson's New York Times piece on this momentous event in American theatre history asks a crucial question pursued by this course: "Two Female Playwrights Arrive on Broadway. What Took So Long?" Paulson points out a glaring discrepancy between the gender demographics of Broadway spectators and the gender identities of the authors produced on Broadway. Roughly 67% of Broadway audiences are female; yet, Vogel's Indecent and Nottage's Sweat were the only new plays by women in a Broadway season that included eight new plays by men. Paulson also notes that the presence of two new plays by women in the 2016-17 Broadway season signals that some strides have been made since the 2013-14 Broadway season, which featured no new plays by women.

**WGST 202. Seeing Gender: Introduction to Gender in Visual Studies - AH, P1** **3 Units**
**Term Typically Offered:** Fall, Spring
**Description:** This course introduces students to the disciplines of Visual Studies and Women's, Gender and Sexuality Studies. It explores the ways in which these fields intersect through consideration of the social construction of vision and its inverse, the visual construction of the social. The first highlights how humans are conditioned to see the way they do because they are social animals. The latter underscores the fact that social arrangements, such as gender and race, take the forms that they do because humans are seeing animals. This framework allows students to critically engage some of the central questions that have shaped both disciplines. How does seeing impose itself upon the social construction of gender and other forms of identity, such as racial and sexual identity? What is the relationship between images and words, and how does that relationship affect the politics of how images are used? How do visual encounters inform the construction of social life as gendered and racialized? Note: ges are used? What are the mechanisms by which vision and visual images become gendered or racialized? Why is visual experience so fraught with anxiety and fantasy? How do visual encounters with other people (and with images and objects) inform the construction of social life as gendered and racialized?

**Description:** Transnational Feminism in Theory and Praxis is both an introduction to transnational feminism and a methods class. Using a mix of recent and older texts, we will examine how scholars in our field of Women's, Gender, and Sexuality Studies (WGST) innovatively link research questions with methods, sources, and interlocutors. In the process, we will reflect on the relationship between what we value as knowledge, and how we pursue and construct knowledge: in other words, the relationship between feminist epistemology and methodology. With an eye towards praxis - the theoretically informed application of knowledge - we will ask ourselves, for whom do we research?

**Description:** Representations of Trauma in the Visual Arts is an advanced exploratory seminar examining the changing relationships between trauma and its representation in the twentieth century. Beginning with the Holocaust, the course charts a trajectory from this most profound of collective traumas, to the refinement of clinical definitions of trauma (e.g., PTSD) in the wake of the Vietnam War, the development of trauma studies in the humanities in the 1990s, to the recent "pictorial turn" within scholarship on trauma. This historical framework will be brought to bear upon the dynamics of how trauma and visuality have been approached by scientists, scholars, and artists. Each week's reading and viewing materials will offer students an example of historical or clinical account of trauma, a secondary or applied analysis, and its artist's original work that responds to the particular traumatic event under consideration. In this regard, students will be encouraged to negotiate the discursive relationships between history, theory, and practice.
