Program Information

Supply chain management is a core function of every global, national, and regional business and offers a growing career path. Global supply chain management involves active management of an organization's supply chain activities and relationships across international borders to maximize customer value and achieve a sustainable competitive advantage. It involves planning how the entire supply chain will function as an integrated whole, and includes management of the flow of goods, data, and finances related to a product or service, from the procurement of raw materials to the delivery of the product. Supply chain managers are responsible for managing costs, improving efficiency, and mitigating risks throughout the supply chain. The major in Global Supply Chain Management empowers students with the critical thinking and business skills necessary to lead businesses and address 21st century global supply chain challenges. The industry-aligned degree program incorporates co-operative experiential learning, a focus on emergent technologies, and the depth of a 27-credit-hour in-person major.
